# Adding godice-connector.com as a trusted SSL certificate
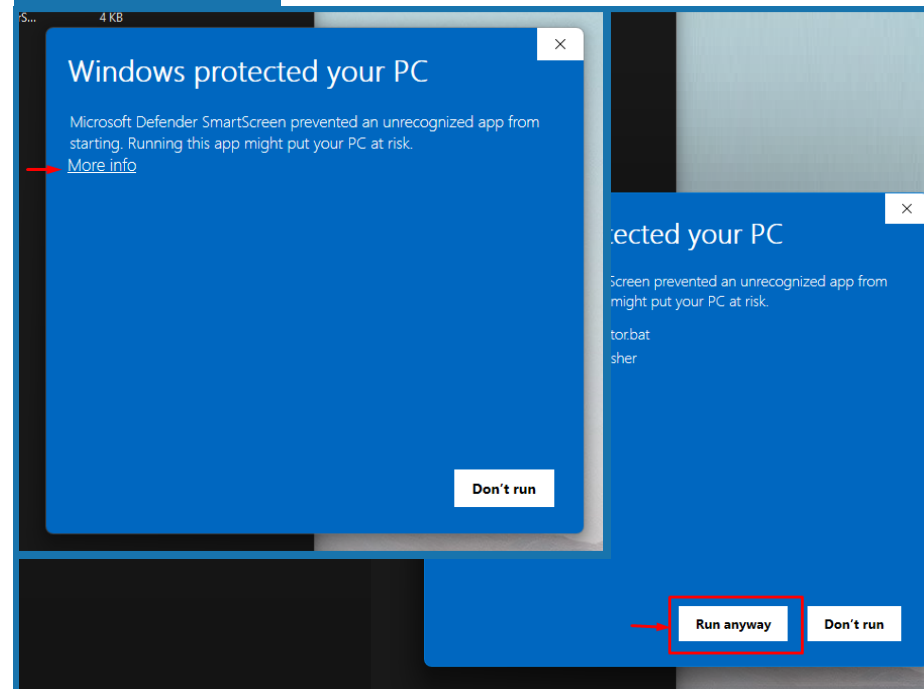

Step 1

Download and Extract (unzip) the two files, *godice-connector.bat* and the *godice-connector.ps1* into the same folder on your PC.

Once there, right-click on the bat file and choose *Run as administrator*.

Download godice-connector zip

Step 2

In case you get this Microsoft Defender screen, click on *More info*, then click on the *Run anyway* button.
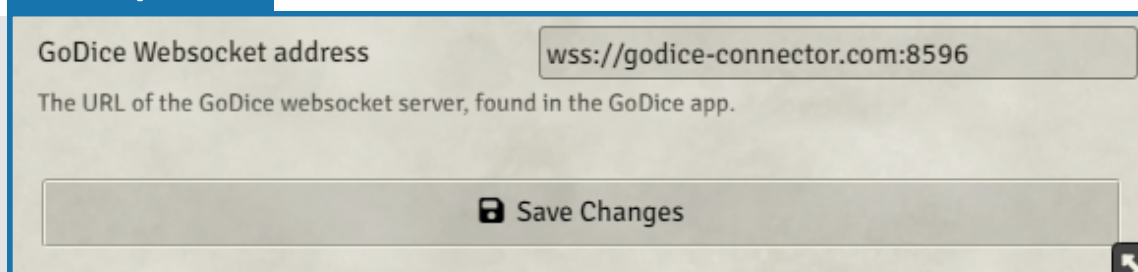

Step 3

Type the local IP number of your mobile device, provided by the GoDice app, into the prompt window. Press enter.

All this simple script does, is assign the godice-connector.com IP to your system's host file, and add the GoDice SSL certificate as trusted

Step 4

Go back to Foundry VTT, to the GoDice Bluetooth Dice configuration.

Make sure to enter this address in the IP prmpt:
wss://godice-connector.com:8596

Save Changes and you're ready to go!
